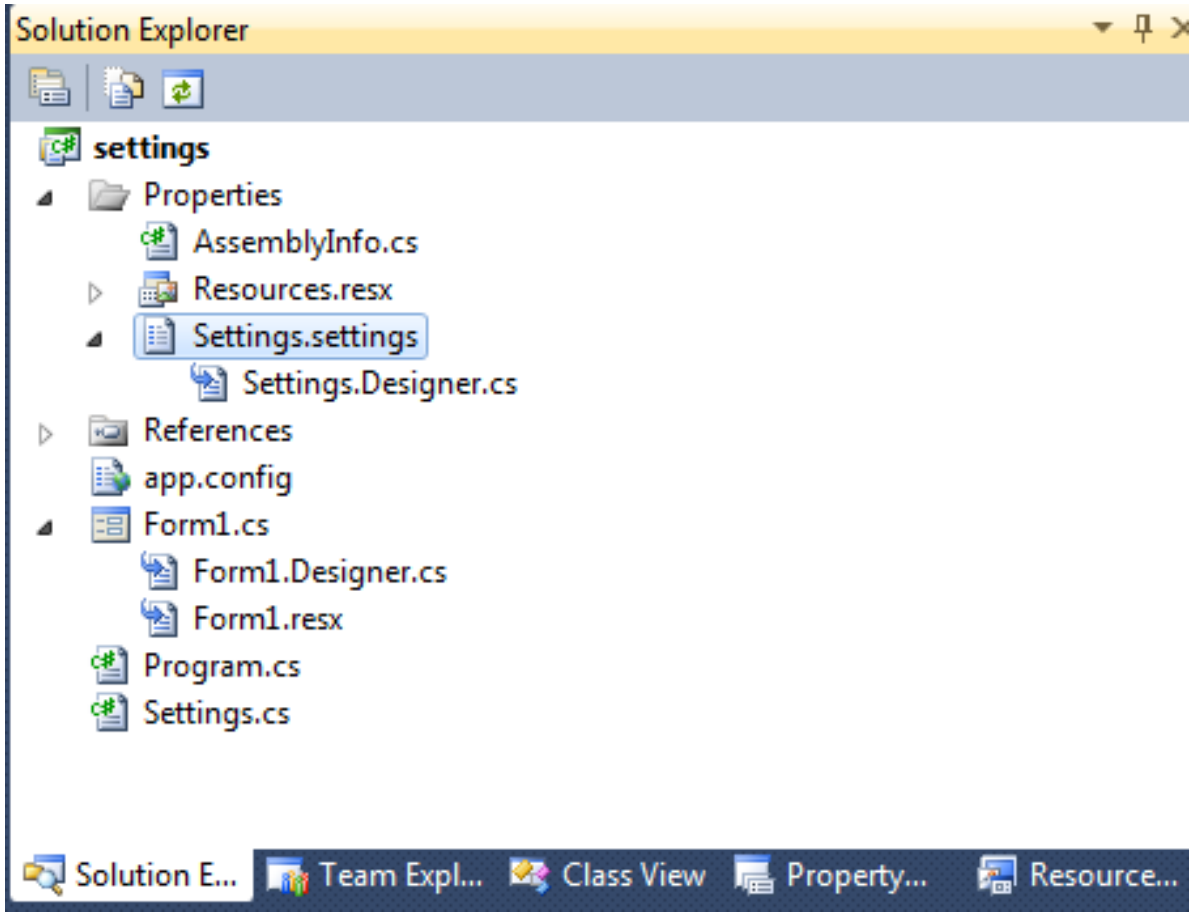
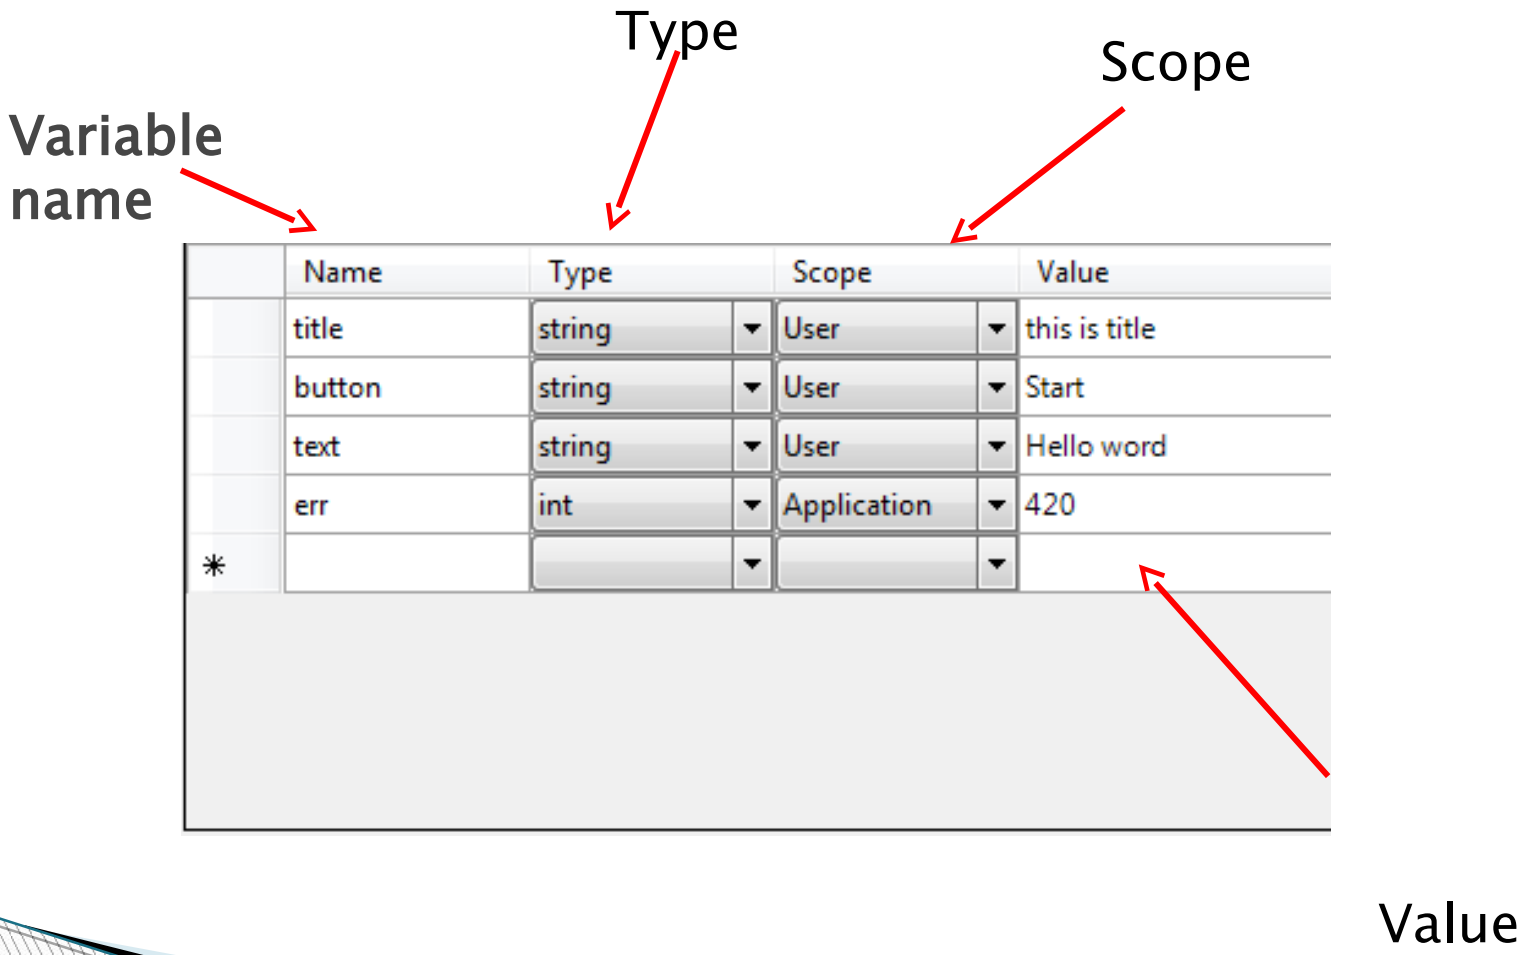
Settings File



Settings File



Settings File

- Scope

->**application scope** represent settings that are used by the application regardless of user preferences

Application-scope settings are read only at run time.

can only be changed at design time, or by altering the settings file manually

->**user scope** are generally less important to the actual application and are more likely to be associated with preferences or other non-critical values.

user-scope settings are read/write at run time, and their values can be changed and saved in code

Example

```
this.Text = Settings.Default["Title"].ToString();
button1.Text = Settings.Default["Button"].ToString();
textBox1.Text = Settings.Default["text"].ToString();
 textBox2.Text=Settings.Default.err.ToString();
this.BackColor = Properties.Settings.Default.myColor;
->Save method
Properties.Settings.Default.Save();
->Access the user setting and assign it a new value
Properties.Settings.Default.myColor = Color.AliceBlue
```

Variable name
