## **LAB 10**

## Requirement

For the problem you have received at the previous lab, you will have to

- 1) Indicate the time complexity for each function from your application.
- 2) Select a function (of your choice) and whose time complexity is not constant and deduce the time complexities in all the cases (best, average, worst).
- 3) At least two function in the project has to be implemented recursively (sort, search, filter, etc.).
